EXECUTIVE SUMMARY

Java Full Stack Developer with 4 years of experience building scalable web applications and backend services. Skilled in developing REST APIs, Spring Boot microservices, and responsive React.js interfaces for enterprise applications. Experienced in the full software development lifecycle, including design, development, testing, and deployment. Proficient in working with cloud platforms, containerized applications, and CI/CD pipelines to support reliable and high-performing systems. Strong team collaborator with experience working in Agile environments alongside product managers, QA teams, and developers to deliver production-ready solutions.

AREAS OF EXPERTISE

◆ Full Stack Java Development	◆ RESTful API Design & Integration	◆ Spring Boot & Microservices
◆ React.js Frontend Development	◆ Cloud Deployment (AWS/Docker)	◆ CI/CD Pipeline Management
◆ Database Design & Optimization	◆ AI-Enabled Backend Services	◆ Asynchronous Messaging
◆ Agile Scrum Methodology	◆ Unit Testing & QA Collaboration	◆ Performance Tuning

PROFESSIONAL EXPERIENCE

Java Full Stack Developer

Adobe

Aug 2025 – Present

Develop and maintain full stack features for internal enterprise platforms using Java, Spring Boot, and React. Design and build REST APIs using Spring MVC, Spring Security, and Spring Data JPA to support application workflows. Deploy containerized services using Docker and AWS EC2, with RDS databases for data storage. Implement caching and messaging tools to improve application performance and reliability.

- Integrated AI-powered APIs to automate content generation processes, reducing manual work by about 60%.
- Implemented Redis caching for high-traffic endpoints, improving system response time and reducing database load.
- Built asynchronous processing pipelines using Kafka and RabbitMQ to handle background tasks efficiently.
- Improved deployment reliability by implementing CI/CD pipelines, reducing deployment issues by about 40%.
- Worked with frontend teams to ensure smooth React and backend API integration, reducing release defects.

Java Frontend Developer

Cisco

Mar 2022 – Apr 2024

Developed customer-facing web applications using React.js, JavaScript (ES6+), and TypeScript. Built reusable UI components and improved application structure to support scalable frontend development. Integrated frontend applications with backend APIs for real-time data interaction. Optimized GraphQL queries to improve application performance and reduce unnecessary network calls.

- Improved data loading speed by around 30% by optimizing GraphQL queries and API calls.
- Built reusable UI components that reduced duplicate code across multiple screens.

- Implemented client-side validation and authentication flows to improve user experience and form completion rates.
- Collaborated with design, backend, and QA teams to deliver UI improvements in Agile sprint cycles.

Java Backend Developer

Feb 2021 – Mar 2022

Mastek

Worked on backend development for internal enterprise applications using Java and J2EE technologies. Developed server-side logic using Servlets and JSP and created data access layers using Hibernate ORM and SQL. Built REST-based endpoints to support communication between application modules.

- Optimized SQL queries used in business reports, reducing report execution time.
- Developed JUnit test cases to improve backend code quality and reduce defects.
- Supported build and version control processes using Maven and Git.
- Assisted in resolving production issues and improving system stability.

NOTABLE PROJECTS

Mini AI Course Generator

Developed a backend module using Java and Spring Boot that integrates with AI APIs to automatically generate course outlines. Designed REST APIs to connect backend services with a React frontend interface. Used PostgreSQL and JPA to store and manage generated course content.

- Reduced manual course outline creation time by about 50%.
- Improved request processing speed by 25–30% through database query optimization.

MentalScope AI – Social Health Analytics Platform

Developed a full-stack AI-powered analytics platform using React, FastAPI, and Python to monitor and analyze mental health discussions from Reddit. Built asynchronous data pipelines with AsyncPRAW for large-scale data extraction and integrated Perplexity AI for automated content summarization. Designed REST APIs for real-time data delivery and implemented caching mechanisms to improve performance. Used Supabase for authentication and data management, and deployed the system using modern cloud tools.

- Processed 20,000+ data points with scalable async pipelines for real-time insights
- Improved API response time by 30–40% using caching and optimized backend design
- Built dynamic dashboards with React, improving user interaction and data visualization efficiency

Enterprise Web Application for Business Operations

Developed internal business modules using Java and REST APIs to automate operational workflows. Built responsive frontend interfaces using React, JavaScript, HTML, and CSS. Integrated Kafka-based messaging to handle background processing and batch operations.

- Reduced average task completion time by about 20% through improved workflow design and UI enhancements.

EDUCATION

Master of Science in Applied Computer Science, *Southeast Missouri State University*

Bachelor of Technology in Electronics & Computer Engineering, *J.B. Institute of Engineering & Technology, India*
